• Group Analytics	25
• FAQs for Group Analytics	26

## Congratulations!

Now that your company has started private podcasting, you have a new, convenient and reliable medium to distribute messages to on-the-go employees. Why podcasting? Considering how popular podcasts are with consumers, it's no surprise more and more businesses are using private podcasts to improve their internal communication. Your company's new podcasting app gives employees the convenience and ability to listen to company shows and episodes just about anywhere - whether at their desk, at home, or on the go.

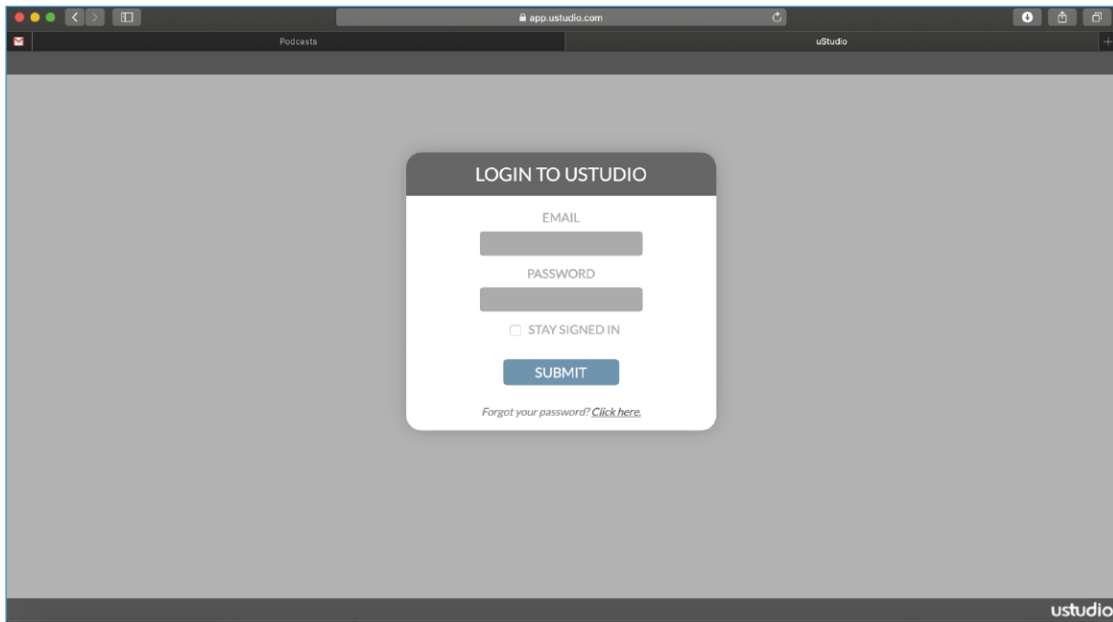

The PMC is uStudio's platform to view and publish content, and it is only accessible to channel administrators. You can always find the workflow for publishing podcast content in our [knowledge base](#) on the uStudio website.

## SIGNING-IN TO THE PMC (Podcast Management Console)

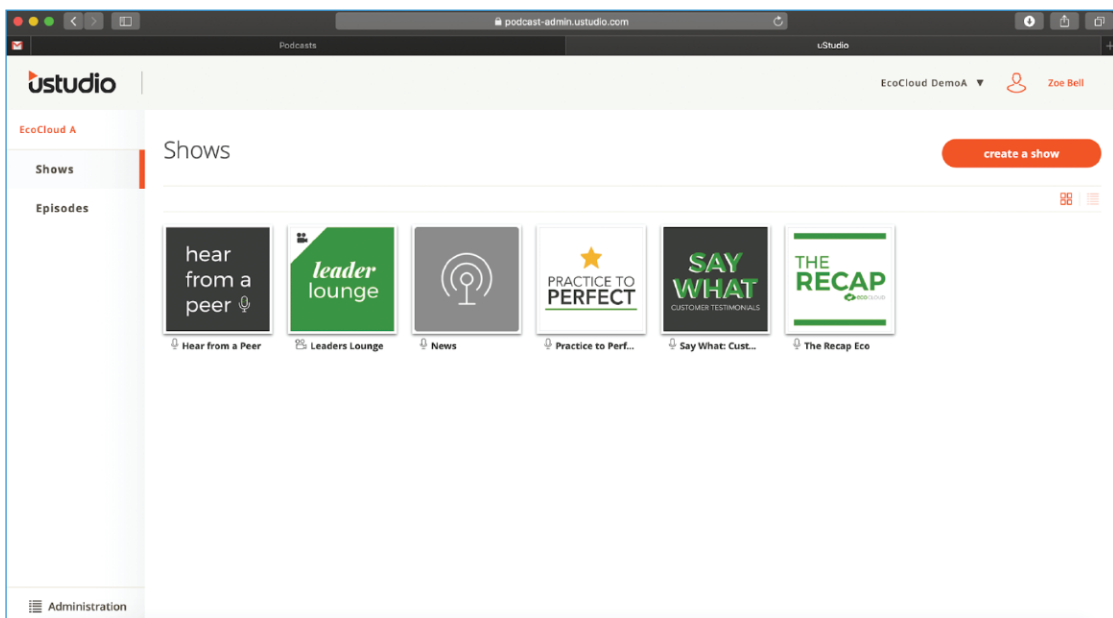

- Podcast Administrators can easily access the PMC through the uStudio website at [uStudio.com](https://uStudio.com).
- Select "Podcast Admin" under "Log In"
- You can also login to the Podcast Management Console (PMC) through this link:  
<https://podcast-admin.ustudio.com/>

- d. Administrators will then be prompted to enter their standard company login credentials.

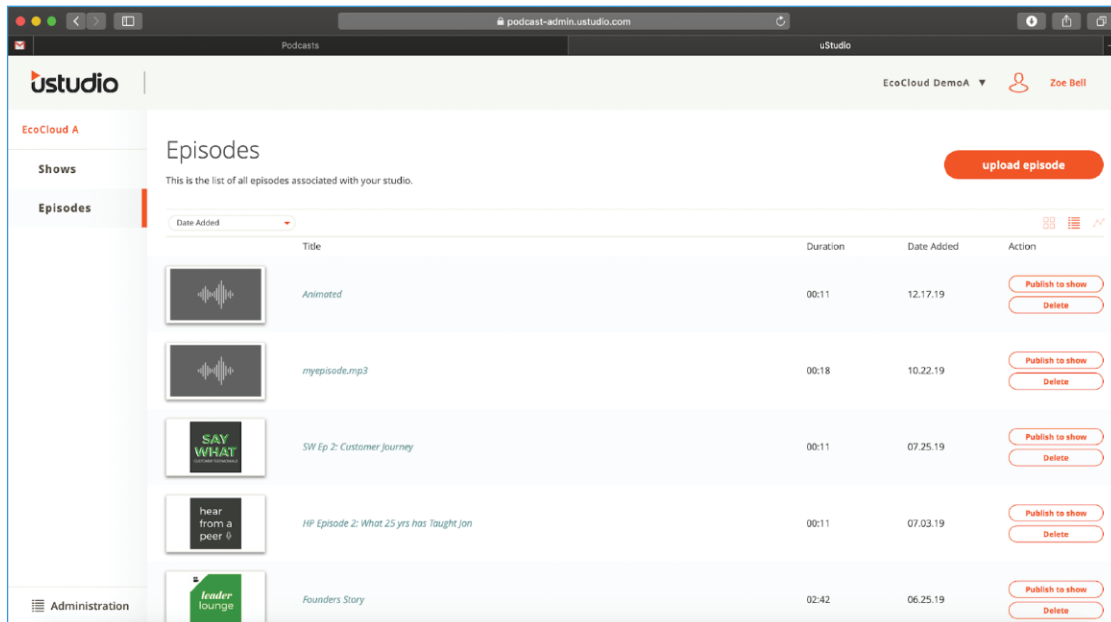

- e. After that, you should successfully be logged in to the PMC.

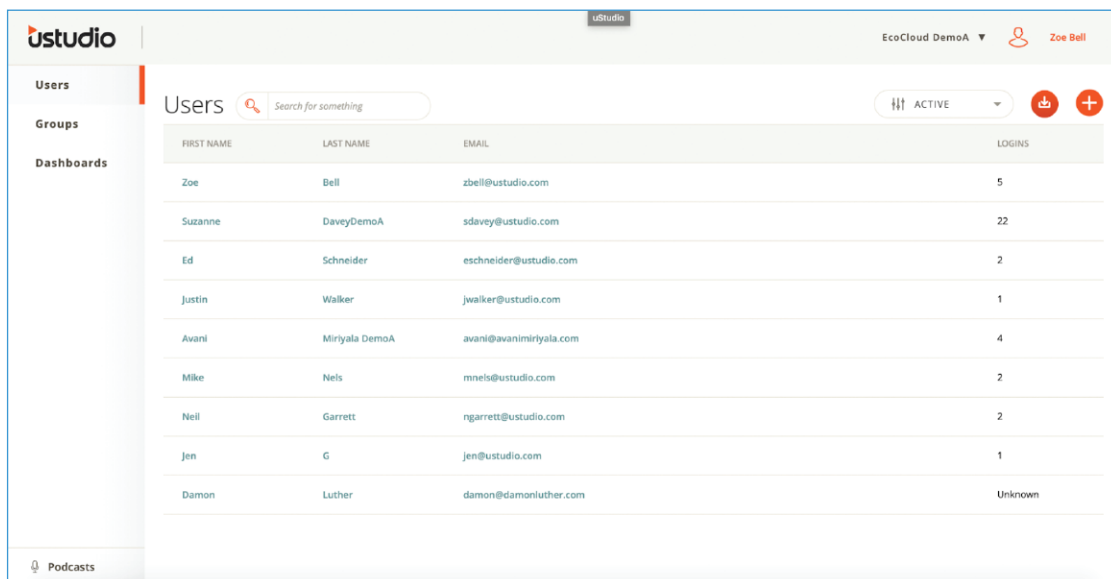

Upon login, the “Shows” view will display all podcast shows that are associated with your studio.

By clicking “Episodes” on the left, you can view all episodes that are associated with your studio.

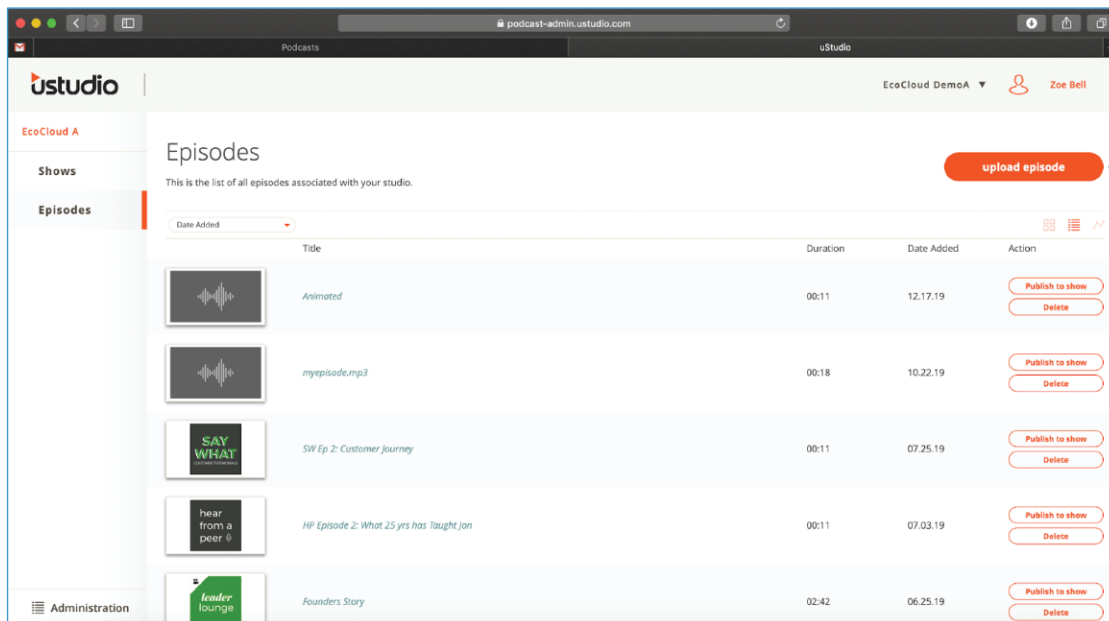

The Administration button at the bottom will take you to the users, groups, and dashboard views.

## MANAGING CONTENT

### Uploading Episodes in Podcast Management Console

- Select “upload episode” in the top right of the episodes section.
- Drag and drop one or multiple files to the upload window to add several episodes at once, or select “Choose File” to open a finder and select one asset at a time. Best practice is to upload no more than three assets at a time.
- A progress bar will appear at the bottom of the upload window to let you know the progress of the upload. You may close out of the window as files finish uploading but do not close the uStudio PMC in your browser.
- Once files have been uploaded, uStudio will take a few minutes to process and convert the file into the best format for the podcast application. You may see the episodes show as a 0:00 duration until this is completed.
- Episodes will by default take on the name of the file you uploaded. You may want to edit the name and thumbnail of the episode before publishing to a show.

## Adding Episodes to Shows

Adding an episode to a show is available in two places: on the show page or in the episode section. Episodes can be published to more than one show and edited slightly.

- To add an episode to a show in the shows section, select the desired show, select “Publish an Episode” on the right, then select the episode(s) you wish to publish.
- There are two ways to add episodes to a show in the episodes section:

The screenshot shows the 'Episodes' section of the uStudio Podcast Management Console. The interface includes a sidebar with 'Shows' and 'Episodes' tabs, a main content area with a table of episodes, and an 'upload episode' button. Annotations with red lines point to the 'list view' icon and the 'Publish to show' button for each episode.

Date Added	Title	Duration	Date Added	Action
	Animated	00:11	12.17.19	<a href="#">Publish to show</a> <a href="#">Delete</a>
	myepisode.mp3	00:18	10.22.19	<a href="#">Publish to show</a> <a href="#">Delete</a>
	SW Ep 2: Customer Journey	00:11	07.25.19	<a href="#">Publish to show</a> <a href="#">Delete</a>
	HP Episode 2: What 25 yrs has Taught Jon	00:11	07.03.19	<a href="#">Publish to show</a> <a href="#">Delete</a>
	Founders Story	02:42	06.25.19	<a href="#">Publish to show</a> <a href="#">Delete</a>

The screenshot shows the 'SW Ep 2: Customer Journey' episode page. The page displays the episode title, a description, and a 'Published Locations' section. An annotation with a red line points to the 'Publish to show' button.

**SW Ep 2: Customer Journey**

Hear from a few of our customers on their take on our customer journey from Sales to Renewal. In developing a successful customer strategy, you must provide answers to questions such as these: Who are our customers? Which of their needs can we address? Given our company's overall value proposition and strategy, what customer experience should we create? What capabilities do we need in order to deliver that experience? How should we organize ourselves accordingly, and what aspects of our culture can help us? A well-designed customer strategy will coordinate many different functions, skills, and practices. For example, it should encompass data analytics; go-to-market and channel choices; and the delivery of products, services, and experiences.

**Published Locations**

[Publish to show](#)

## Creating Shows and Video Podcast Shows

**Note:** If you do not see the option to create a video show in your podcast admin experience this may not be part of your current offering. If you are interested in adding it to your offering please reach out to [support@ustudio.com](mailto:support@ustudio.com).

As a helpful tip for video shows, we recommend creating show artwork that indicates the content is video content. An example is putting a video icon in the corner.

## Selecting Video Show Type

- Create a show.
- A show is created by going to the shows section of the console, then selecting the “create a show” button on the top right of the page.

The screenshot shows the uStudio Podcast Management Console interface. On the left is a sidebar with 'Bell Studios' at the top, followed by 'Shows' (highlighted with a red bar) and 'Episodes'. At the bottom of the sidebar is an 'Administration' link. The main content area is titled 'Leader Lounge'. It features a green square thumbnail with a video camera icon in the top-left corner and the text 'leader lounge' in white. Below the thumbnail is a red 'upload' icon. To the right of the thumbnail, the 'Show Type' is set to 'Video' in a dropdown menu. A red line points from the 'Video' option to an annotation on the right that says 'Select "Video" in the Show Type'. Below the 'Show Type' is a 'Description' field with a placeholder text: 'Please enter a description. Note: Once published this information will be displayed to your podcast viewers.' Underneath the description field is the 'Control Access to this Show' section, which has two radio buttons: 'All Users' (selected) and 'Private (Selected Groups Only)'. At the bottom of the form are 'save' and 'cancel' buttons. The top right of the console shows 'ZOECAST' and a user profile for 'Zoe Bell'.

Select “Video” in the Show Type

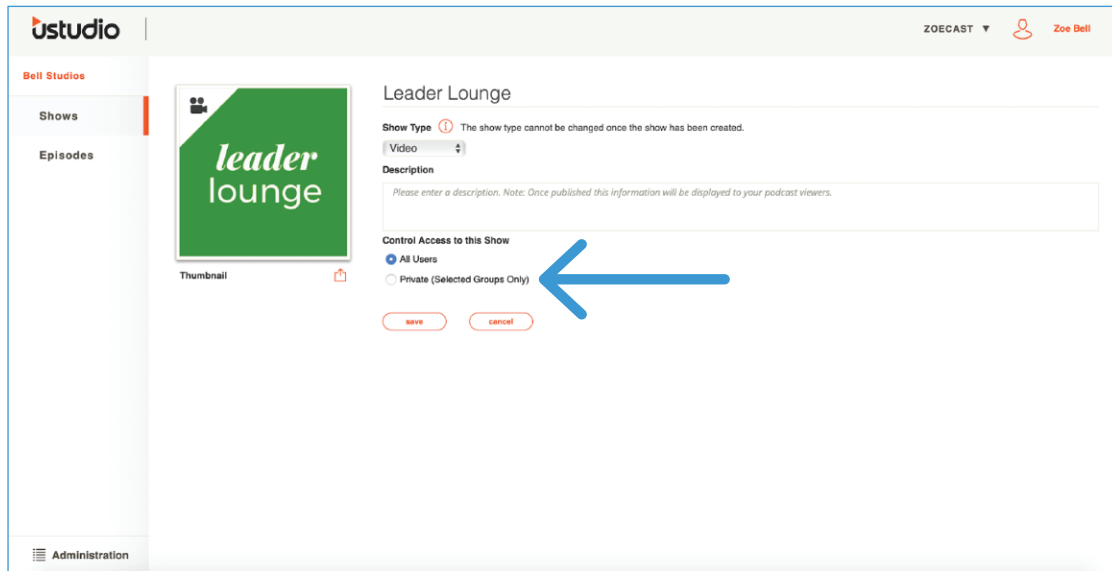

**Note:** Once you set the show type you will not be able to change it.

- Once you have created the show, add video episodes to your episode section of the site and publish them to the video show.
- Your users will now be able to watch video when watching this show.

## Creating a Draft Show

Filtering a show to “private” with no group assignments associated to it will put the show in a draft state. This way, only those who have access to the podcast management console can see it.

## Editing and Deleting Episodes

All episodes are uploaded with only the file name associated. They will need to be edited in order to add pertinent information to correctly display for your audience. This will also allow for better searchability within the podcast application.

- Select the title of the episode in the list of episodes in the episode section, or on the show page, to access the details for that episode.
- The episode detail page will show you the thumbnail, title, and description of what is already associated to that episode. You will need to go into the edit screen to view the keywords and internal notes for the episode.
- Editing an episode will change the details associated to the episode across all shows to which that episode is published.

## SW Ep 2: Customer Journey

Hear from a few of our customers on their take on our customer journey from Sales to Renewal. In developing a successful customer strategy, you must provide answers to questions such as these: Who are our customers? Which of their needs can we address? Given our company's overall value proposition and strategy, what customer experience should we create? What capabilities do we need in order to deliver that experience? How should we organize ourselves accordingly, and what aspects of our culture can help us? A well-designed customer strategy will coordinate many different functions, skills, and practices. For example, it should encompass data analytics; go-to-market and channel choices; and the delivery of products, services, and experiences.

Given our company's overall value proposition and strategy, what customer experience

Keywords

Renewal, Customers

Internal Notes

Notes are for internal use only. They are not displayed to the podcast viewer.

save cancel

**Title:** This should be a short, easy way for users to understand the topic of the episode. Simply click on the title to edit.

**Description:** Gives your audience relevant information about the episode.

**Keywords:** Place keywords and phrases users can use to search for the episode in the application.

**Thumbnail:** A square image that will give your audience a visual queue for each episode.

To delete an episode, select "Episodes" on the left, then change the view to "list view" using the icons on the right. Next, select "Delete" on the episode you wish to delete.

## Keyword Rules:

- No individual keyword can be more than 30 characters.
- If you take all the keywords, join them with a comma "," and no spaces, then the total length has to be less than or equal to 500 characters.
- The code doesn't correctly support unicode.

## Pro-tips for your podcast episodes:

- **Keep it Short:** Try to think of titles and descriptions that are easy for your audience to read and understand at a glance, since they may be on the go.
- **Add Links to the Description:** You can add links in an episode description allowing you to reference supporting materials. Make sure the link is the full link starting with http://.
- **Consistent Keyword Structure:** Make it easier for your audience to explore content by creating a keyword structure that you use across all of your content. Then share this structure with your team.

## Show and Episode Artwork

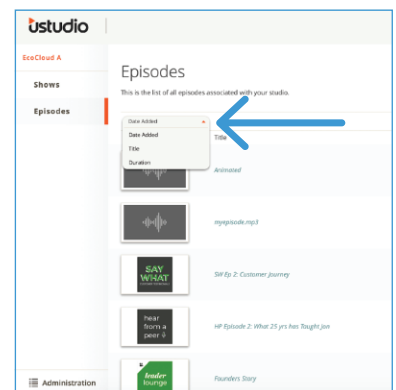

Show and episode artwork should be square and suggested to be at least 360px x 360px to ensure it looks best when scaled up on the web application. We support both JPG and PNG formats.

## Viewing and Sorting Episodes in the PMC

**Sorting Episodes:** You have the ability to sort episodes in various ways from the drop-down list on the left. This will default to Date Added but can be changed to view episodes by Title or Duration.

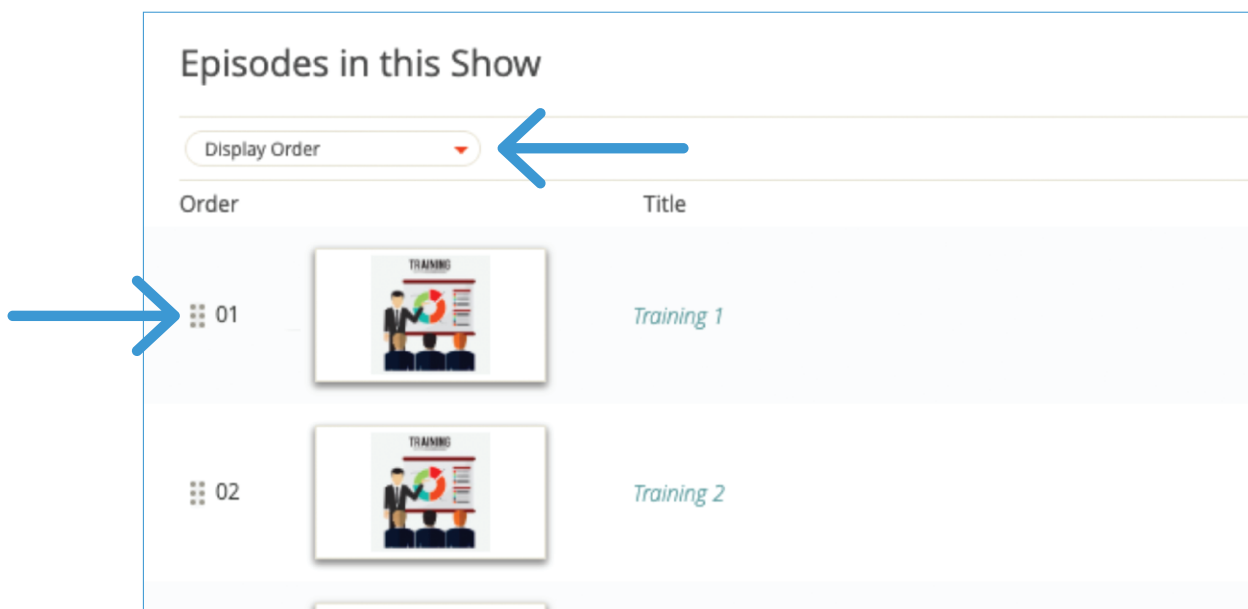

**View Format:** To change the view format for episodes in either the episodes section or within a show, select either "grid view" or "list view" using the icons on the right of the page. By default you will see episodes in the list view.

## Re-Ordering Episodes in Shows

In the PMC you have the ability to order episodes in shows in a way that makes the most sense to your company.

- Go to the shows section in the PMC.
- Click on the show in which you would like to adjust the episode order.
- By default, the episodes in the list will show in "Display Order" in the top left dropdown above the episode list. In this setting, you will see a small grid icon next to each episode on the left.
- Click on the grid icon next to the episode you would like to move and drag it up or down in the list to re-order the episodes.
- The order you see on the show page will be the order you audience members will see in the application. You can change this at any time.

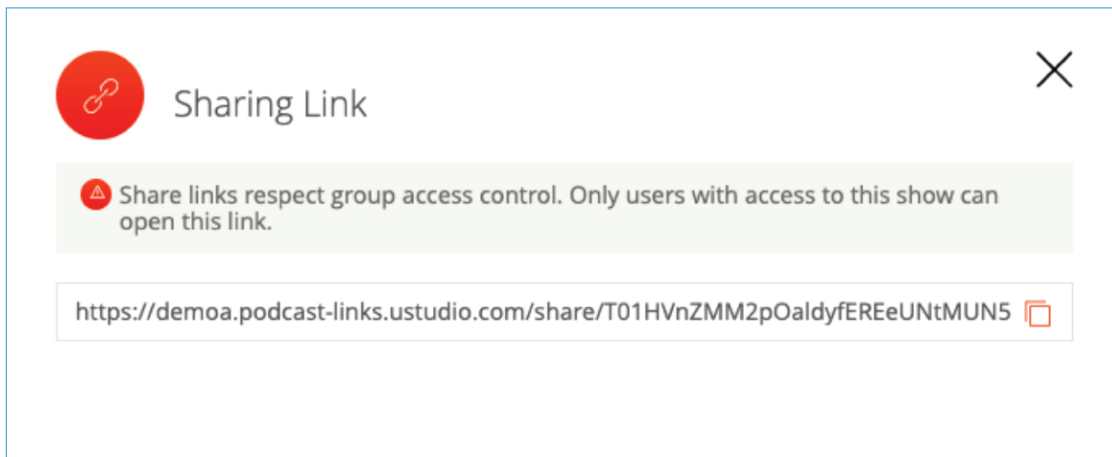

**Pro Tip:** Highlight an older episode with a timely topic by dragging it to the top of the list during a certain time period.

## Universal Share Links for Episodes

Our share links allows users to open the link in a way that meets the needs of their environment. Below is how you, as an admin, can find content links to share in promotional materials and how the links will open for your users based on if they are on a phone or computer.

## Accessing Share Links for Promotional Materials

- Go to the Podcast Management Console.
- Go to the shows section.
- Go to the show in which the episode has been published.
- Next to each episode in the show you will see a little link icon.
- Click the link icon next to the episode you would like to share.
- Copy the link that is displayed by clicking the icon to the right or by highlighting the link and copying it.
- Use this link in emails and other promotional materials to send your podcast audience to this episode.

If an audience member clicks on the link while on a mobile device and has not downloaded an application:

- The audience member will be taken to a page letting them know the best mobile experience is on the mobile device and give them links to download the application.
- If they download the application they will go through the steps above after downloading.
- The audience member can dismiss this download app prompt and will be taken to the web version of the application on the mobile browser.
- They will log in using their company authentication process, if not already logged in.
- The user will be taken to the show page with the episode already playing.

## Share Link FAQs

What happens if someone who does not have access to my podcast finds one of these links and goes to it?

If the person who clicks the link does not have access to your podcast they will be taken to the application login screen and will not be able to login. This will prevent them from getting access to any sensitive content.

Why do I have to wait until an episode is in a show to get the link?

Since episodes can be published to more than one show we want to make sure we send the user to the episode in the correct show.

How can I create promotional materials before a show is published?

To create promotional materials with links to certain episodes before a show is published, you must first create a show that is set to "private" and has no group assignments associated with it. This will put the show in a draft state where only those who have access to the podcast management console can see them.

## PODCAST BRANDING

As part of your podcast application setup, there are a few branding assets the uStudio team will need in order to brand your podcast application. In addition, there are a few branding assets your team will need to brand the shows and episodes within the application. This will give you an overview of what is needed and where it is shown within the application.

### Company Code

When audience members download the application for the first time they will need to enter a company code to be taken to your version of the application. Pick a code that will be easy for your team to remember.

### Code Requirements

- All capital letters
- No spaces
- Between 3 and 15 characters

COMPANYPodcast

COMPANY Podcast

1234Podcast

## Primary Logo

### Location of Logo in App

- Initial login screen
- Top right of application
- Podcast episode share page

### Logo Format Requirements

- Rectangular: 400px width x 134px height
- Logo needs to be legible on a white background
- File format PNG or SVG with transparent background

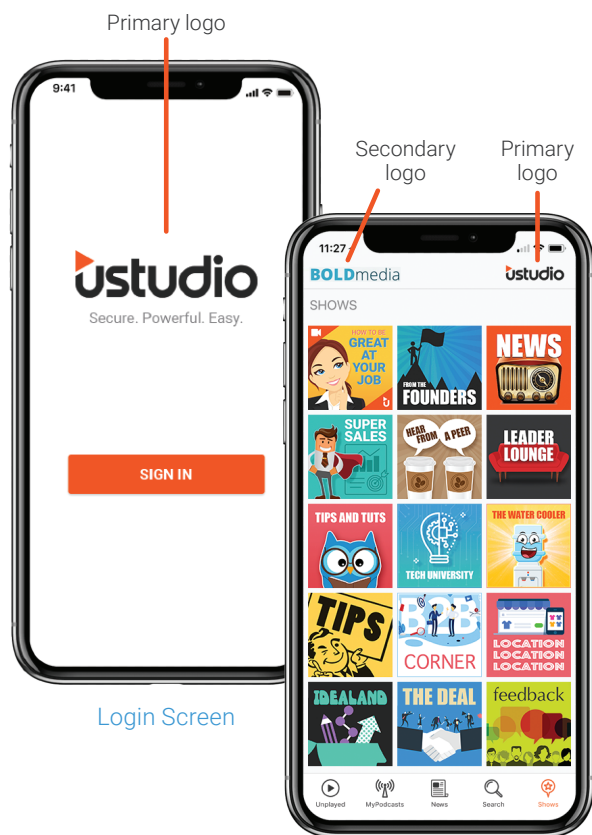

## Secondary Logo

### Location of Logo in App

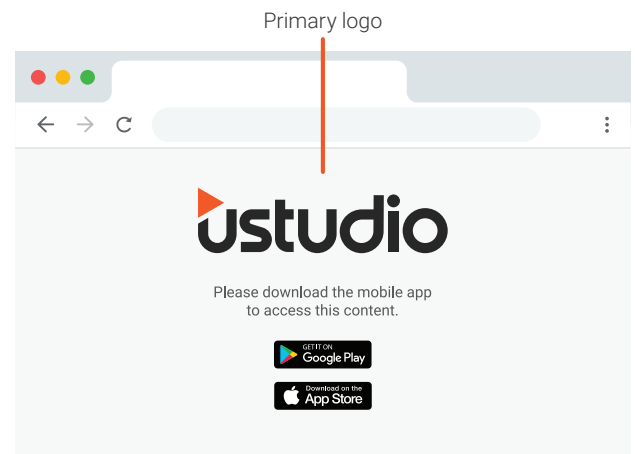

- Top left of app when the back button is not present

### Logo Format Requirements

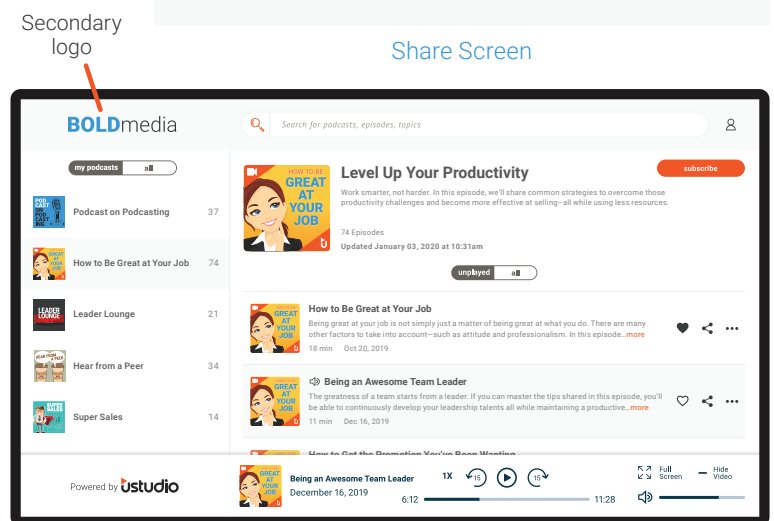

- Square 100px x 100px
- Logo needs to be legible on a white background
- File format PNG or SVG with transparent background

## USERS SECTION

The user section is where you can view and manage your podcast audience members. Audience members will only display in this section if they have been invited to the application through the PMC or logged into the application.

If you are using the Single Sign On (SSO) process for audience application logins, you will only be able to view users on this page. Companies using SSO will need to work with their IT teams to restrict access to the application or edit audience information.

View, edit or deactivate audience members

## Inviting Podcast Members (uStudio Authentication)

For customers using uStudio's authentication process, you will have the ability to invite users to your podcast application through the uStudio Platform. You can do this in two ways: Single user invites or Bulk Import invites.

You can invite audience members through the administration section of the Podcast Management Console on the bottom left of the navigation bar.

- Click on the plus symbol on the top right of the user section.
- The pop-up below will open when you click the plus symbol.

**Single Invite:** Send out invites one at a time for new audience members. Clicking the invite button will trigger an email to the individual inviting them to set up their podcast account.

**Bulk Invite:** Send out multiple invites to a group of audience members. After uploading the CSV you will be able to review the information. Once you confirm the information you can trigger an email to everyone on the CSV file inviting them to set up their podcast account.

A properly formatted CSV file will need the users First Name, Last Name, and Email address. You can view a sample of the proper format below:

First Name	Last Name	Email
John	Doe	johnD@yourcompany.com
Jane	Doe	janeD@yourcompany.com

**Note:** Having duplicate users in a file will cause an error. Be sure to remove duplicates prior to uploading the file.

## Adding Users To Groups During Bulk Invite

If you have audience groups as part of your uStudio plan, you can assign users to groups during the bulk invite flow. A few things to note about adding users to groups during the invite flow:

- The Group must be created in the PMC prior to assigning users to the group. If you need help creating groups, you will find directions later in this guide or can [visit our website here](#).
- Group names must match the exact spelling and format of the name of the group in the PMC. For example: If you created a group in the PMC and titled it "Sales and Marketing", but in your CSV upload only put the term "Marketing" in the group column, the upload will not map correctly and will not successfully add that user to the group. If you put "Sales and Marketing" in the group field they will be correctly added to the group.
- You can add users to more than one group. To do this, you will need to put a comma between groups with no space before the group name.

First Name	Last Name	Email	Groups
John	Doe	johnD@yourcompany.com	group1,group2,group3
Jane	Doe	janeD@yourcompany.com	group1,group3

## Deactivate a Podcast User Through the PMC

You have the ability to revoke podcast access for a specific audience member. You can do so by following the steps below in the PMC.

- Go to the "User" section of the PMC.
- Click on the name of the user in which you would like to revoke access.
- Click the "edit user" button in top right of the screen.
- Select "inactive" in the "user status" dropdown.
- Click "Save".
- The user will no longer have access to the application.

## GROUPS

### Creating Groups

Groups are available to allow uStudio administrators and/or content creators to restrict access to shows to a specific target audience. This enables content creators to restrict information that is sensitive to those who should have access to it. Another use of groups is to limit the amount of content that users see. By doing this, audiences will only be exposed to the content that is most relevant to them and their needs.

- Creating groups is available in the PMC through the Admin Section on the bottom left.
- Once in the admin section, you will see a group section.
- Press the plus button on the top right of the screen or the "create group button" if you have not created groups before.
- Enter a group name that your content creators will be able to easily recognize.
- Enter a description that gives a little more insight to what the group is meant to do.
- Create the group.

		Show A (private)	Show B (private)	Show C (private)	Show D (public)
Group X 		✓	✓	✗	✓
Group Y 		✓	✗	✗	✓
Group Z 		✗	✓	✗	✓

## Restricting Shows to Target Audiences

Podcast shows can be restricted to certain audience groups so only audience members in the group can see the associated content. You can restrict groups while setting up or editing a show. Groups need to be created in the Administration section of the site before you can restrict a show to that group.

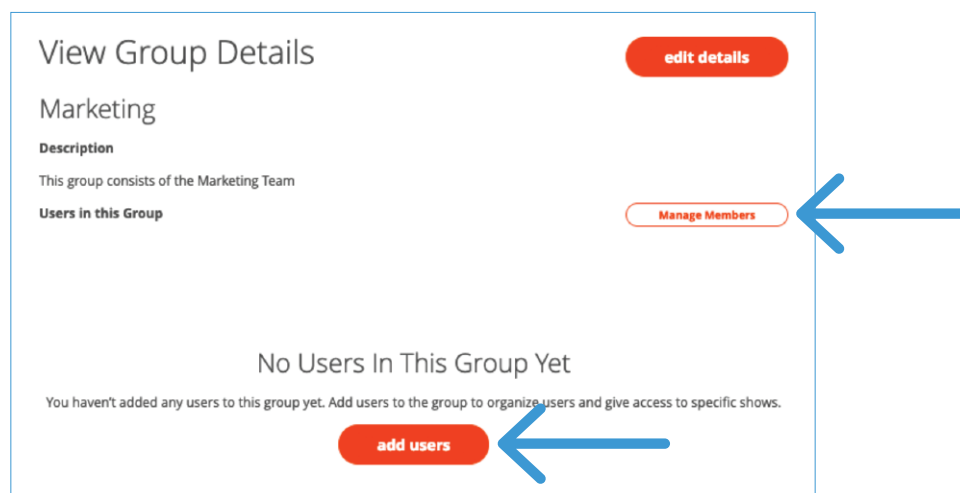

- Select "Private" under "Control Access to this Show".
- Type in the group name that was created in the Administration section of the site and select the group that matches.
- Assign a show to as many groups as desired. By adding more groups, you will widen the show audience.
- Save the changes you've made.

## Adding Members To Groups (non-SSO)

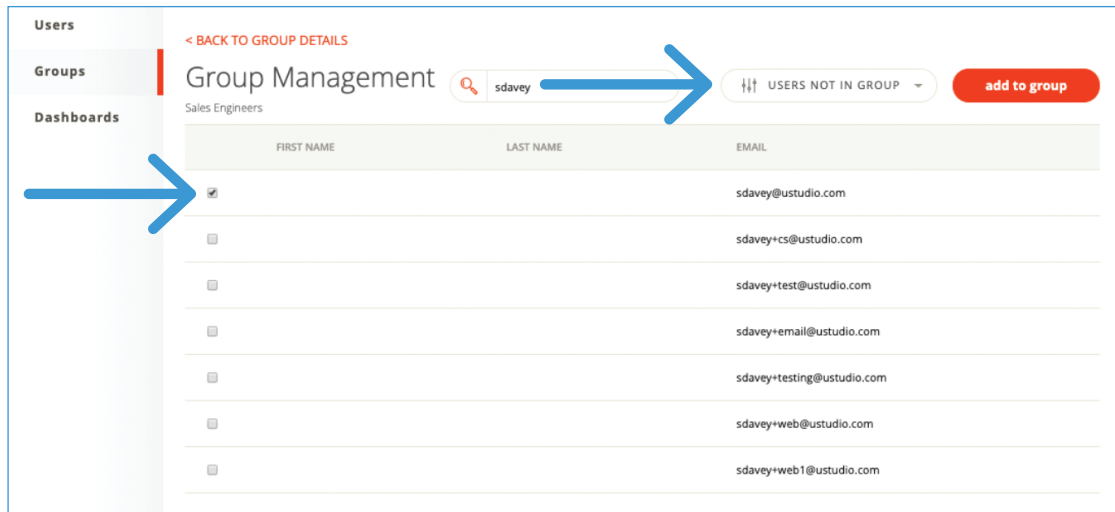

You can add members to groups during the invite flow or after an audience member has logged into the application. You need to create a group before you can add members. To add members to a group follow the steps below:

### Adding Members After Login:

- Go to the administrative area of the PMC.
- Click groups on the left navigation.
- Click on the name of the group in which you would like to add members.
- Once in the Group Details view, click "manage members" or "add new users".

- Initially, you will be taken to a screen of users currently in the group.
- At the top of the page on the left select the "Users Not in Group" filter to see audience members to add.
- Check boxes to the left of audience members you would like to add to the group.

- Click the "add to group" button found on the top right of the screen to add the checked users to the group.
- The page will refresh and give you a small pop-up confirmation that users were added to the group.
- Once the users are added they will no longer show on the "Users Not in Group" section of the user management screen.
- Select the "Users In Group" to see the users you added to the group.

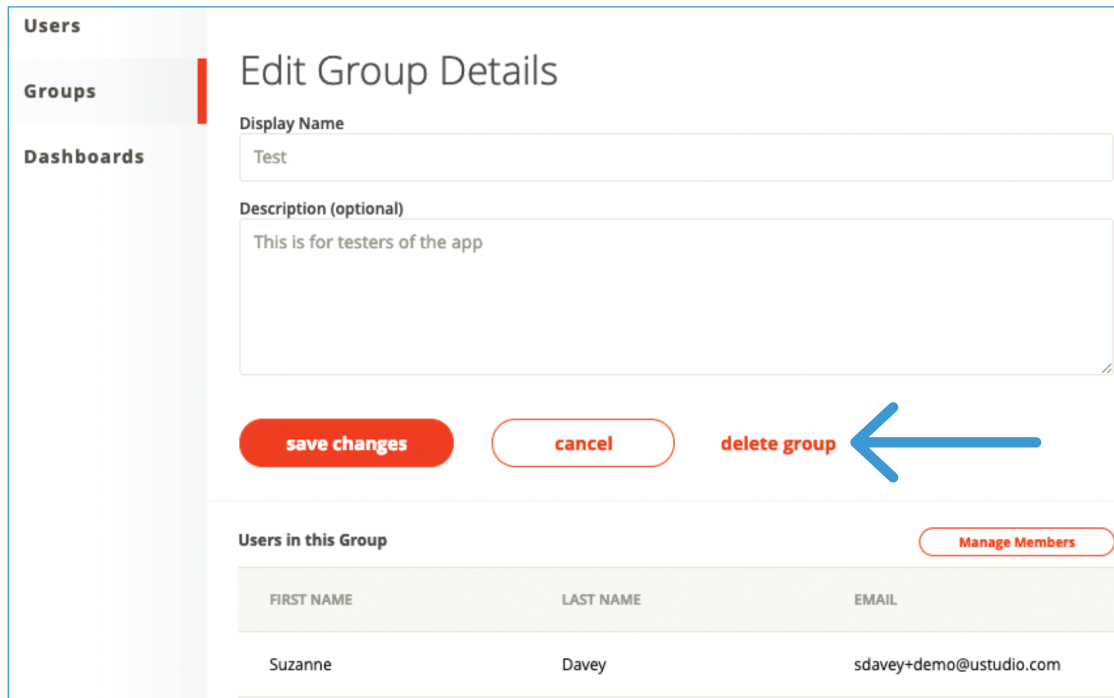

## Deleting Groups Within The PMC

You have the ability to delete user groups in the administration section of the Product Management Console. Once a group is deleted you cannot bring it back. All users that are members of that group will be removed from the group.

**You can delete a group by following the steps below:**

- Go to the administrative area of the PMC.
- Click on the group name you would like to delete.
- Click the "edit details" button.
- Click the delete group link under the description.

**Users**

- Confirm you would like to delete the group.
- Leave the pop-up window open while the group deletes. This action will vary in time depending on the number of users you have in the group.
- One the group deletion is successful, the upload pop-up will close automatically. There will be a confirmation notification in the bottom right corner.

## USTUDIO ANALYTICS

uStudio offers access to better audience insight through analytics. The ability to track and measure podcast usage helps you to improve how your company communicates and create better learning outcomes for your employees. Our named-user data enables you to know who's engaging with what, when and how often. Not only are our dashboards available to you but you have the option of piping data into your own internal systems as well.

To view your Analytic Dashboards, select "Administration" then "Dashboards."

## Engagement Data

The engagement surfaces where within the content users are engaged. Data will be tracked based on what part of the content the user consumes. For example, data for a user will be collected at the 30% mark onward if a user seeks (fast forwards) to the 30% mark within the episode and listens to the content from that point on. A few things to note:

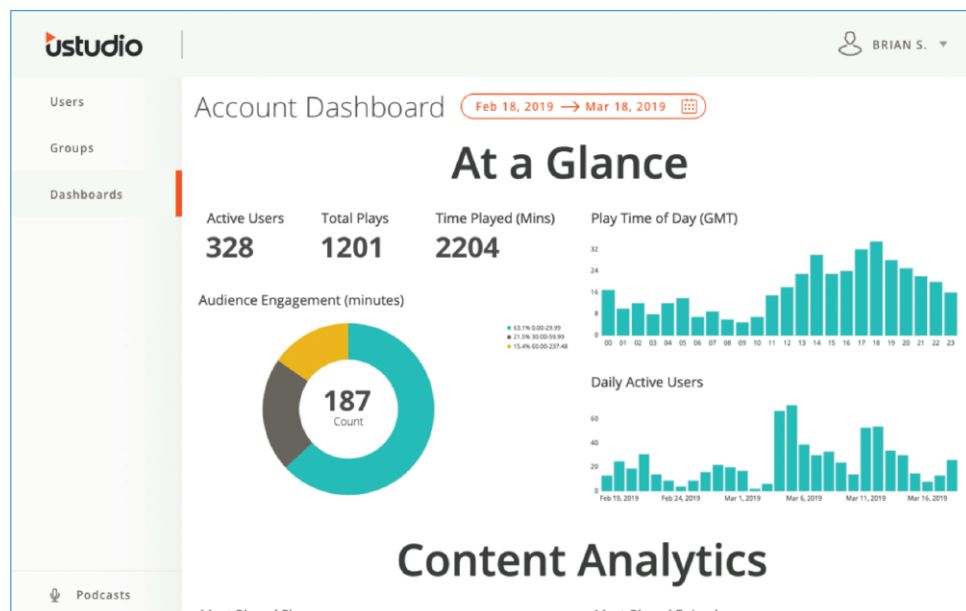

- All users who play the content will be tracked at the 0% mark since the content auto-plays when navigating to the player.
- This data is reported in 20% segments. So if a user plays from 0-43%, the engagement numbers will increment for 0%, 20%, and 40%. However, if a user seeks to the 50% mark it will show they engaged at 0% and then from the 50% mark and beyond.
- If a user rewinds to re-listen to a portion of the content the area of the content will be tracked as many times as they rewind. This will help surface engaging content that users may want to listen to more than once. This also allows content creators to uncover what pieces of content are resonating with users.
- You can understand how many minutes of content that have been consumed by reviewing the table of metrics below the chart. For example, if most users made it to the 50% mark this means they have consumed 50 seconds of content.

## Metrics in the At a Glance Section

Dashboards allow you to see a high-level view of your podcast application performance within a certain time frame. It focuses on when audience members are listening, your top content, and your most active audience members. It also gives you the ability to download detailed information on actions taken in the application to allow you to dive into the data in a way that meets your needs. The analytics available in the "At a Glance" section include:

- **Active Users:** number of audience members that have logged into the application at the time frame selected.
- **Total plays:** total number of times the play button has been clicked in the time frame specified. This can show more than one play per audience member if they have listened to episodes multiple times in the time frame selected.
- **Time played in minutes:** total number of minutes played across all audience members within the specified time frame.
- **Audience Engagement:** breakdown of the amount of time each audience member played during the time frame selected. This number will be smaller than the total plays since this graph only shows each audience member once whereas plays can show multiple plays per audience member.

- **Time of Day (GMT):** This graph lets you see trends in the time of day your audience is listening to content. The times are displayed in Greenwich Mean Time and in Military Time format. To better understand what time of day your users are listening to content, convert this data to your audiences time zone. Hover over individual bars to see the specific count of users for that time.
- **Daily Active Users:** An Active User is defined as an audience member who has taken an action in the application. Actions include: logging in, listening, viewing content, liking episodes, and subscribing to shows. Hover over individual bars to see the specific count of users for that time.

## Available Metrics for Content Analytics

- **Most Played Shows:** This will display the most played shows across all of your podcast content in the time frame specified. Plays will show a cumulative number of all plays. This will increase each time the play button has been clicked and will show multiple plays per users who have listened to an episode more than once. You have the ability to view and download a list of all shows by selecting the "View all XX rows" under the list.
- **Most Played Episodes:** This will display the top episodes across your entire podcast content in the time frame specified. You have the ability to view and download a list of all episodes by selecting the "View all XX rows" under the list.
- **Most Shared Episodes:** This will display the top episodes across your entire podcast content in the time frame specified. You have the ability to view and download a list of all episodes by selecting the "View all XX rows" under the list.

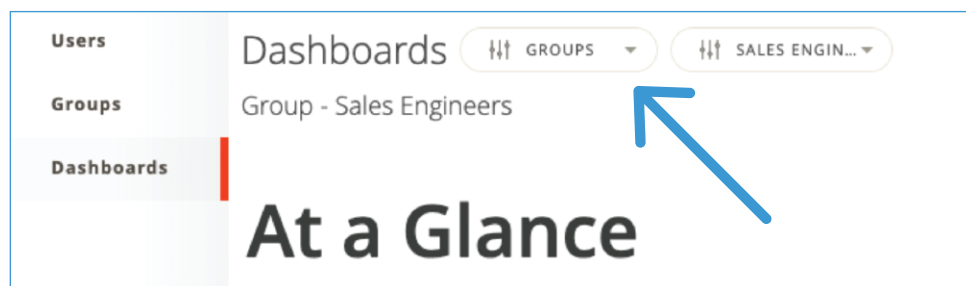

## User Data

- **Most Active Users:** Most active users will show you all users sorted by those who have the longest played time in the app for the time frame selected.

## Group Analytics

If you have created audience groups within the Podcast Management Console you can filter your analytics dashboard to the group.

- Go to the Administration section (bottom left) of the Podcast Management Console.
- Go to dashboard in the navigation.
- Select the filter that says "All users" on the top left of the dashboard.
- Select groups from the filter.
- A new filter will appear for groups.
- Select the group whose data you would like to see.
- The analytics will now show data for users that have been assigned to that specific group.

The orange filter at the far right of your dashboards view will allow you to filter your analytics by a specific time frame.

## FAQs for Group Analytics

### How do you filter the group data?

The filter will pull any events across any shows and episodes for users who are in that group.

### If a user is in more than one group will their stats show in both filters?

Yes, this allows you to see the group stats as a whole. We will show the users interactions in both dashboards.

### Why do I see shows/ episodes that are not restricted to the group I chose?

This is because a user in that group has access to that show and has played it.

### What happens to the analytics if a user is removed from the group?

The user's historical stats for when they were in the group will remain in the group filter but will not show after their group membership was revoked.

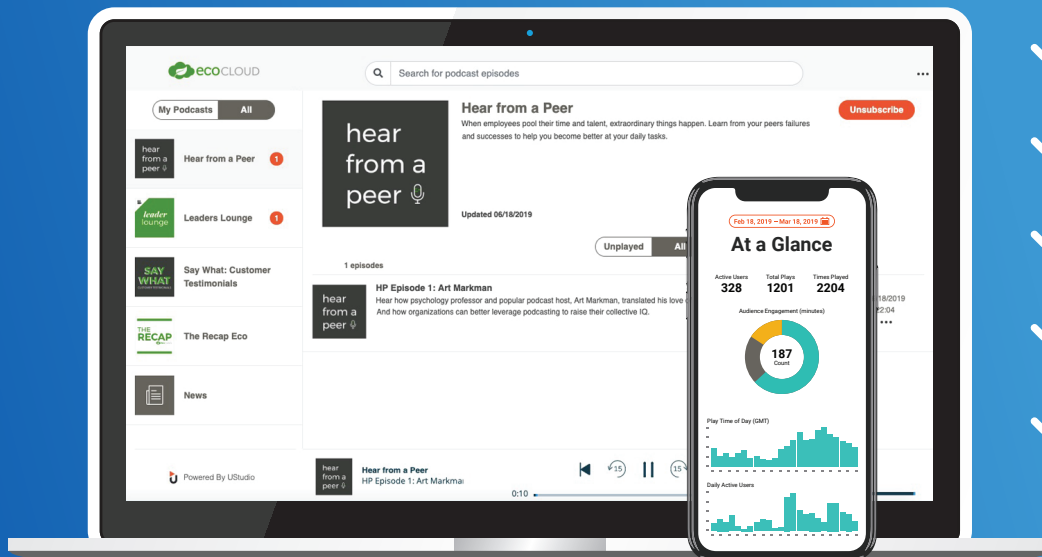

**Have additional questions?** Check out our FAQ Page or Blog for helpful uStudio resources. uStudio customers who have technical questions or issues can contact [support@ustudio.com](mailto:support@ustudio.com). *Happy podcasting!*

Modernize the way your business communicates. uStudio's private podcast solutions allows businesses to deliver corporate audio and video content securely to any device in a modern, mobile-first experience. Our customers are reinventing employee, customer & partner experiences using uStudio's marketing-leading tools for podcasting and complete media management. uStudio's secure mobile and desktop products are purpose-built for enterprise use cases, helping business leaders reach increasingly remote and hard-to-engage employees with 5x the effectiveness of traditional channels. Our patented media platform delivers turnkey solutions for everything from town hall meetings to more effective sales training and customer success programs. This is why market leaders like Nike, Universal Music, Astellas, Facebook, Dell and Kohl's leverage uStudio's media solutions for speed, scale and competitive advantage.
